Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 9, 11-13 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent no. 4,173,317 to Hamayasu et al.

Hamayasu et al disclose, among other things, a sound producing mechanism for use in a spinning reel having a reel unit and a spool that is disposed around a spool shaft, a fishing line being wound around and released from the spool, the sound producing mechanism producing sound by relative rotation between the spool 6 and the reel unit (1, 5), the spinning reel sound producing mechanism comprising: a first sound producing portion 11 having an attachment portion mounted to one of the spool and the reel unit, and a plurality of saw tooth portions 11a that are formed in a saw tooth shape circumferentially apart on an outer peripheral surface of the attachment portion; and a second sound producing portion 12 that is mounted to the other of the spool and the reel unit, and has a front end portion 12c that is configured to come into contact with the saw tooth portion 11a of the first sound producing portion 11, the first sound producing

Art Unit: 3654

portion 11 being mounted to the one of the spool and the reel unit so as to be rotatable relative to the second sound producing portion when the spool rotates in a line releasing direction and unrotatable when the spool rotates in a line winding direction (see last 5 lines of Abstract).

Claims 10 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent no 6,116,531 to Young.

Young discloses the use a pawl member and a spring member that urges the front end of the pawl member toward the saw tooth portions.

Allowable Subject Matter

Claims 4-8 and 14-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
